**CESNET in Czech Television**  
June 17, 2011  
Some CESNET employees appeared in the Milénium programme of the Czech Television ČT24 news channel. The broadcasts—transmitted during May and June—focused on following topics:  

- Music processing over the 10,000 kilometers distance (discussion participants: Věra Komrží, UPP and Michal Krsák, CESNET).
- Future of the computer networks (Karel Vrtěch, TERENA and Jan Guntörck, CESNET).
- Telemedicine (Shoji Shimizu, Kyushu University and Jiří Navrátil, CESNET) and
- Internet addresses are running out. What next? (Jiri Chaloupka, Cisco Systems and Pavel Satrapa, CESNET)

You may watch the programmes from the Czech TV archive.

**Datagram No. 26**  
June 10, 2011  
New release of our [Datagram](#) bulletin (in Czech) is dedicated to the TERENA Networking Conference 2011 and related events.

**Distributed concert**  
June 3, 2011  
UltraGrid technology developed by CESNET enabled a unique concert in California. The musicians as well as the listeners were divided between two music halls 150 km apart. Detail are available in the [press release](#).

**Review of TNC 2011**  
May 23, 2011  
The TERENA Networking Conference 2011 ended in Prague on May 19. Current [press release](#) recapitulates the key information regarding this important event. The [TERENA General Assembly](#) seamlessly followed the conference.

## VMMC and their big push for telehealth

Posted on: October 28th, 2011

The [Veterans Memorial Medical Center](#) (VMMC) once again tried a telehealth session assisted by the Philippine Research, Education and Government Information Network (PREGINET) last 26 October 2011 held at the VMMC Valdes Hall.

Said telemedicine session, dubbed as Phacoemulsification Conference 2011, was

attended by different eye doctors in Metro Manila who are practicing Phacoemulsification Cataract Surgery. The conference was also participated in by Dr. Shuji Shimizu of the Kyushu University Hospital in Japan, as well as Mr. Renato C. Doctor, Officer-in-Charge of the Philippine Heart Center's Hospital Information System.

Dr. June Mendiola, Head of the VMMC Department of Ophthalmology said that it was their first time to tap the PREGINET in assisting VMMC in this big event. "Mr. Bayani Benjamin R. Lara of the [Department of Science and Technology](#) (DOST) introduced telehealth to VMMC which is not yet used in Phaco Conference," said Dr. Mendiola.

### Phaco Con 2011 being the first eye telehealth

Phaco Conference is a regular event staged by the Philippine Society of Cataract and Refractive Surgery. Usually, eye doctors bring their respective recorded surgery videos to show and share their experiences in Phacoemulsification Surgery. However, telehealth came into light in their last session in 2011 through the help of the PREGINET.

"We recognize the use of this telehealth, with the help of the DOST people, as an option to sustain the teleconferencing probably in the future [conferences] without moving from one place to another. We can stay in our respective hospitals or even in our respective homes through live streaming or video conferencing and continue discussing things without the need to travel," Dr. Mendiola explained.

Dr. Shimizu commended the initiative of the VMMC and PREGINET in showcasing the very first eye telehealth because according to him, the [Asia Pacific Advanced Network](#) (APAN) only conducts telehealth on thorascopic, laparoscopic, endoscopic and oncological surgeries. He also said that the APAN would fervently welcome the next telehealth on eye surgery.

In time, the Philippine Society of Cataract and Refractive Surgery hopes to apply the telehealth technology in the Society's future activities, specially, those that are beneficial for the learning of the eye doctors.

"We would like to thank the DOST people for assisting us in this event. This is very promising," said Dr. Richard C. Kho of the [American Eye Center](#).

### The PREGINET-assisted technologies

Telehealth uses various technologies such as telephones, satellite technology, and videoconferencing facility to remotely consult with the specialists or diagnose patients.

In the Phaco Conference 2011, the PREGINET gave technical assistance on the following technologies:

- **Videoconferencing.** The PREGINET had an H.323 videoconferencing with the Kyushu University and Philippine Heart Center in Manila.
- **Video Streaming.** A live streaming was done and the eye doctors who were not present at the event could view the session via mobile devices.
- **[Digital Video Transport System](#) (DVTS).** DVTS, which is a free and open source software, was used by PREGINET to deliver the live surgery in the operating room. This was done by using the current VMMC network infrastructure and a sending machine that used [Ubuntu Linux](#) as its operating system.

"This is the same technology being used by advanced research networks in doing telemedicine across the globe. I am glad the ophthalmology doctors in VMMC took the initiative of working with us and adapting it to a government hospital setting," said PREGINET Multimedia Engineer Alvin M. de Gracia.

## Endoscopy attachment in Japan

**Norwani BASIR,**

**Division of Gastroenterology and Hepatology, Department of Medicine,  
RIPAS Hospital, Brunei Darussalam**

I had the wonderful opportunity to go to Japan under the sponsorship of Kyushu University Hospital, Fukuoka Japan (Panel) for a two week endoscopy attachment (6<sup>th</sup> September to 20<sup>th</sup> September 2011). The Department of Diagnostic and Therapeutic Endoscopy of Kyushu University Hospital, Fukuoka won a grant to sponsor trainees from the Asia-Pacific region to be attached in their endoscopy centre.

Fukuoka, or Hakata, is a fairly modern and the largest city located on the northwest of Kyushu. Voted number 14 in 2010's poll of the World's most livable cities, Fukuoka is praised for its green spaces in a metropolitan setting. Divided into two areas by the Nakasu river, Hakata is the business district, and Tenjin the shopping district, the Japanese version of Oxford Street, London.

On the day I arrived, I went to Kyushu

**Correspondence author:** Norwani BASIR

University Hospital (15 minutes by subway) and met Professor Shuji Shimizu who was in charge of the programme. I was informed that they have 15 doctors who come annually for attachment. I was introduced to other trainees in the programme from Thailand, Singapore, South Africa, New Zealand, Indonesia at different levels of their training and was given timetable for my two week stay.

The attachment started at 9am and usually finished by 5.30pm. The hospital is a new and modern and has its chain American coffee branch and Subway restaurant in the foyer. A cheaper option for lunch is at the students' union building, which sells okay-food for 380 yen (BND \$6), the cheapest meal I ever had during my stay. The endoscopy suite is a well equipped, contemporary unit with eight procedure rooms and a very comfortable waiting area. It has a separate medical data room where all digitalised images from the procedures are collated and reported.

Japan has the highest incidence of Gastric cancer. Hence, early gastric cancer screening is patient. Endoscopic intubation is performed up to

**BASIR. *Brunei Int Med J.* 2011; 7 (6): 355**

Panel of the left: Prof Kenshi Yao (seated in blue uniform). Panel on the right: Team with Prof Uedo seated to the far left

third part of the duodenum and viewed meticulously with white light endoscopy. For each procedure, up to 40 images are captured. The endoscopist will then perform chromoendoscopy with indigo carmine and areas that are not taken up by the dye will be evaluated with a mini-probe Endoscopic Ultrasound (EUS) and Narrow Band Imaging (NBI). Morning sessions are dedicated to early gastric cancer (EGC) screening with 30 procedures per day carried out. Afternoons are usually booked for colonoscopies (what amazing bowel preparations!), and therapeutic endoscopies such as Endoscopic Submucosal Dissections (ESD) and Endoscopic Mucosal Resections (EMR). Language was not a problem as the endoscopists speak good English and taught us during the procedures.

The endoscopists, like in Brunei Darussalam, comprise of both the gastroenterologists and the surgeons. In Japan, the radiologist with a GI interest also performs endoscopy. I spent a day at Fukuoka University Chikushi Hospital with Professor Kenshi Yao, the pioneer of Magnification Endoscopy. A gastroenterologist by profession, he is also cum radiologist and pathologist, performing barium studies and looking into specimens that he had resected or biopsied.

I was also attached to the Osaka Medical Centre for cancer and cardiovascular diseases under the supervision of Professor Noriya Uedo, the person who made this Japan attachment possible. Transportation was sponsored and used the Shinkansen, (bullet train that travels up to 300km/hr) costing \$415. He and his team were very helpful and taught the basic techniques of ESDs, EMRs

and Auto Fluorescence Imaging (AFI). Apart from arranging accommodation, Professor Uedo also took his time to bring me around Nara and Kyoto during the weekend.

Had I been able stay for a month, I would have spent a few days at the National Cancer Centre Tokyo. Overall, I have learnt a great deal, procedures that we don't do in Brunei Darussalam and rarely done even in Singapore. This experience has exposed me to the advance diagnostic and therapeutic techniques that are available in Japan, and not currently used in Brunei Darussalam. Japan, being the forefront in the endoscopic field, has taught me the importance of using different diagnostic techniques to achieve precise diagnosis especially in early gastric cancer screening. Chromoendoscopy, Magnification Endoscopy with NBI, AFI, interventional EUS are a few of many I have learnt during my short stay, together with different therapeutic techniques such as ESD, EMR, oesophageal dilatation (CRE-TTS method) and Photodynamic therapy.

I am very grateful to Professor Shuji Shimizu of Kyushu University Hospital for the opportunity and privilege to come as a visiting scholar. It was an honour to have had been taught by Professor Kenshi Yao and to Professor Noriya Uedo for imparting valuable knowledge and generosity. I hope some of the techniques will be introduced to Brunei Darussalam. As this is a yearly programme, budding endoscopists (physicians and surgeons) have this wonderful opportunity, at the same time to enjoy the wonderful and rich culture and language of the land of the rising sun.

## Leaflet

## Access

A map of Japan with a red dot indicating the location of Fukuoka. A detailed inset map shows the Fukuoka region, including the city of Fukuoka, the airport, and the surrounding areas. The map highlights the route from the airport to the TEMDEC Hospital Campus, showing the subway line and the road.

### Route from Airport

By Subway  
 Fukuoka Airport ▶ (Subway Kuko Line) ▶ Nakasu-Kawabata St.  
 ▶ (Transfer Subway Hakozaki Line) ▶ Maidashi-Kyudaiyoinmae St.  
 ▶ Hospital Campus

By JR  
 JR Hakata Train St. ▶ (Kagoshimahonsen Line) ▶ JR Yoshizuka St.  
 ▶ (Walk: about 10min) ▶ Hospital Campus

By Taxi  
 From Airport: 15min  
 From JR Hakata Train St: 15min  
 From JR Hakata Yoshizuka St: 5min  
 From Tenjin St: 15min

 FAX: +81-92-642-5983

## Greeting from Director

The purpose of TEMDEC is to organize attractive and useful remote education in Asia by taking a full advantage of high-speed academic Internet and advanced technologies. New medical knowledge and advanced procedures are shared routinely and consistently across the geographic borders.

With reliable and solid teamwork between medical staff and engineering people, we are now expanding these activities from Asia to the rest of the world. Furthermore, the application of the system to the real patient care is our on-going project with the cooperation with International Medical Relations in our hospital.

We sincerely appreciate your kind cooperation and great support.

Director of TEMDEC  
**Masao Tanaka, MD, PhD, FACS**

Dec. 2011

## About TEMDEC

### Aim

The aim of this center is to establish effective and consistent medical communications among Asian countries using super-fast Internet and advanced technology.

### Main activity

- Remote medical education:
  - Organizing programs and preparations for the event.
- Remote patient care:
  - Tele-consultations and arrangements for international patient care.
- Development and application of new technology:
  - For more connections and better images.
- Development of attractive contents:
  - Consistent search for the new applications.
- Secretariat of Medical Working Group of Asia-Pacific Advanced Network:
  - <http://www.apan.net/wg/medical.php>
- Center for international exchange programs:
  - Invitation of foreign medical doctors and engineers

### History

Our telemedicine activity started in 2002, when Korea-Japan co-hosted World Cup Soccer Games and these two countries were connected with a big optic fiber. "Gankai project" was organized by industry/government/academic groups in order to accelerate the mutual remote communications in various fields such as education, culture, business, and medicine. TEMDEC was formally established in Kyushu University Hospital in 2008.

### Telemedicine conference room

Since April 2010, new teleconference room has been installed with a variety of the latest equipment, such as DVTS, Polycom, Vidyo, High Definition Streaming.

## Activities

Teleconference

Live Demonstration

High Definition Streaming

### Contents

- Laparoscopic Surgery
- Thoracoscopic Surgery
- Gastrointestinal Endoscopy
- Transplantation
- Medical Informatics
- Pathology
- Urology
- Healthcare
- Interventional Cardiology
- Nursing
- Lifestyle Related Disease
- Fetus Medicine
- Student Education
- Pharmacology

## Technologies

### DVTS

-Digital Video Transport System

### H.323 Video Conference System

-Polycom, Sony, LifeSize, Tandberg,...

### H.264/SVC Vidyo Conferencing System

-Client-server style video conferencing software

### HD-SCR

-High Definition Streaming Combined Remote conference system

### Tele-pointer

-Remote pointing system for telepresence

## Medical Working Group -APAN

### APAN

APAN (Asia-Pacific Advanced Network) is a non-profit international consortium established in 1997. APAN is designed to be a high-performance network for research and development on advanced next generation applications and services.

### Medical Working Group

Medical Working Group was organized in 2005, and Kyushu University Hospital has been secretariat for all telemedicine activities.
