COE Lecture Note Series

Volume No. : 30

Title : Mathematical Quantum Field Theory and Renormalization Theory

Editors : Takashi Hara, Taku Matsui, Fumio Hiroshima

Written In : Japanese

ISSN : 1881-4042

Published In : 2011年1月31日

Contents:

Celebrating Professor K.R. Ito and Professor I. Ojima on their 60th birthdays . . . 1
Tetsuya Hattori (Keio Univ.)

A Theory of Scattering Based on Free Fields 10
R.F. Streater (Department of Mathematics King's College London)

Superconformal field theory, operator algebras and noncommutative
geometry 21
Yasuyuki Kawahigashi (Department of Mathematical Sciences University of
Tokyo)

Boundedness of Entanglement Entropy, and Split Property in Quantum Spin
Systems 30
Taku Matsui (Faculty of Mathematics, Kyushu University)

On GNS representation of supersymmetric states in C^* -dynamical systems . . .
. 39
Hajime Moriya (Shibaura Institute of Technology Saitama Japan)

A unified scheme of measurement and amplification processes 48
Ryo HARADA (Graduate School of Science, Kyoto University)

On Generalized Cumulants* 57
Hayato Saigo (Kyoto university)

The Strange World of Non-amenable Symmetries¹ 66
Erhard Seiler (Max-Planck-Institut für Physik)

Local Causal Structures Relating Quantum Field Theories on Different
Spacetime Backgrounds 78
Martin Porrmann (Quantum Research Group, School of Physics, University of
KwaZulu-Natal and National Institute for Theoretical Physics Durban, South
Africa)

Representations of Quantum Phase Spaces with Infinite Degrees of Freedom	92
AsaoArai (Department of Mathematics, Hokkaido University)	
Random Point Fields, Random Measures and Bose-Einstein Condensations	103
Hiroshi TAMURA(Graduate School of the Natural Science and Technology Kanazawa University)	
Semi-classical limit of the lowest eigenvalue of $P(\Phi)_2$ Hamiltonian on a finite interval	114
ShigekiAida (OsakaUniversity)	
Have Fun Exploring Circuit QED with Non-Commutative Oscillators –From Mathematics to Experimental Physics- In Honor of K.R. Ito and I. Ojima on their 60 th birthday	127
Masao HIROKAWA (Osaka University)	
Existence and abcence of ground state of the Nelson model on a pseudo Reimnannian manifold	136
AkitoSuzuki (Departmentmathematics,Kyushuuniversity)	
The Relativistic Pauli-Fierz model	145
Fumio Hiroshima (Faculty of Mathematics, Kyushu University)	
Critical Behavior of Stochastic Geometric Models and the Lace Expansion*	162
TakashiHara (Faculty of Mathematics Kyushu University)	
Stochastic ranking process and web ranking numbers	178
Tetsuya Hattori (KeioUniversity)	
A Singular Limit Theorem in Statistical Learning Theory	192
SumioWatanabe (P&I Lab, Tokyo Institute of Technology)
