Abstract

Forty two species of Sphingidae (Lepidoptera) collected in Thailand are enumerated. Of which twenty four species are here recorded for the first time from Thailand. Twenty two species are photographed.

Introduction

Tams, 1924, J. Nat. Hist. Soc. Siam 6 : 229-289, recorded 26 species of the Sphingidae from Thailand. During my Thailand survey in 1979, 1980 and 1981, under the Project of "Ecological studies on shifting cultivation and its transformation process to sustained upland farming", I tried to collect as many sphingid moths as possible. My collecting sites are : the Khon Kaen University Farm at Chulabhorn Dam (Nam Phrom Dam), Amphoe Khon San, Changwa Chaiyaphun, is located about 140 km west of Khon Kaen, a general elevation ca. 800 m. But one specimen was collected at Khon Kaen Province, Northeast Thailand.

Most of the material are preserved in the collection of the Entomological Laboratory, College of Agriculture, University of the Ryukyus, but some are in Dr. H. Inoue's collection.

I wish to express my sincere thanks to Dr. H. Inoue, Otsu Women's University, for his kind advice and valuable guidance. I also wish to thank Mrs. Juthat Attajarusit, Div. of Animal and Entomology, Ministry of Agriculture, Thailand and Mr. Sawaeng Ruaysoongnem, College of Agriculture, Khon Kaen University for their helping in field survey.

The species here first recorded from Thailand will be indicated with an asterisk after species name.
