thick ^糊elastic leather,

^糊microcellular rubbers, ----- available only *in Karachi*

covering part of the sandals,

magic tapes, ----- *should be imported.*

strings & rubber-paste. ----

3. Necessary Goods for Sandals.

- ^{縫合}suturing machine, polishing machine, other small instruments.
- one room about 6x7 m

4. Necessary staffs.

- one shoe-maker (^{under}matric boy) supervised by PT & doctor.
- One specialist of shoe-making is to be trained in proper institute, for providing orthopedic shoes in future.

5. Scheduled Plan.

- April to SEptember ----- Decide types of the shoes.

Estimate needs & budget.

- October to November ---- Start producing the sandals.

- From December ----- Complete the providing-system.

Start providing sandals.

6. Management.

a) principles

- priority to regular cases & females, ulcer cases.
- Share the money with patients. (Do not give free.)
- good connection with other DIC
- combined with health education

b) gross procedures for providing sandals

- Prescribed by a medical doctor.
- The style is suggested by PT.
- Made by shoe-maker.
- Checked by PT.
- Recorded & provided by social workers.
(The price is to be decided according to its economical state.)
- Regular check-up by PT.
- Order repairment and replacement by PT and/or Dr.
- One staff is to be responsible for this workshop.

*Prepare a document-sheet that should be simple as possible.

7. Further plan in 1986.

- produce all kinds of foot-wear, including orthopedic shoes.
