Fig. S26. Spectral properties of DIMP calculated by TD-DFT. *IE*, (1) 9.63 eV or 128.7 nm (B3LYP/cc-pVTZ//B3LYP/cc-pVDZ), (2) 9.93 eV or 124.8 nm (WB97XD/cc-pVTZ//B3LYP/cc-pVDZ) (3) no data available in NIST.

Fig. S27. Spectral properties of DMMP calculated by TD-DFT. *IE*, (1) 10.03 eV or 123.7 nm (B3LYP/cc-pVTZ//B3LYP/cc-pVDZ) (2) 10.30 eV or 120.4 nm (WB97XD/cc-pVTZ//B3LYP/cc-pVDZ) (3) 10.00 eV or 124.0 nm in NIST.

Fig. S28. Spectral properties of TATP calculated by TD-DFT. *IE*, 8.67 eV or 142.94 nm; *EE*, 5.53 eV or 224.01 nm.

Figure S29. Block diagram showing the generation and measurement of the second harmonic emission of the Yb laser. (A) no telescope (B) with telescope (200 mm, -50 mm, anti-reflection coating). Laser power, 2.46 W; wavelength, 1032 nm; repetition rate, 120 kHz; beam diameter, 3 mm; beam propagation factor, $M^2 < 1.2$; beam polarization, p-polarized; pulse energy, 20.4 μ J. (A) peak intensity at the BBO crystal, $I = 1.44$ GW/cm²; output power of the second harmonic emission, 210 mW; conversion efficiency, 8.6 %. (B) beam diameter, 0.75 mm; $I = 23$ GW/cm²; output power of the second harmonic emission, 930 mW; reflective loss on a prism, 205 mW (9.15 %). The output power of the second harmonic emission generated by a BBO crystal was 1010 mW (conversion efficiency, 41.1 %). The spectral bandwidth of the second harmonic beam was 1.9 nm (FWHM).

Figure S30. Block diagram showing the generation and measurement of the fourth harmonic emission of the Yb laser. The fourth harmonic beam was separated from remaining second harmonic and fundamental beams using two dichroic mirrors. The output power achieved for the fourth harmonic beam was 480 mW (conversion efficiency from 1032 nm to 257 nm, 19.7 %). The spectral bandwidth of the fourth harmonic beam was 2.15 nm (FWHM). Note that a conversion efficiency from 1032 nm to 257 nm is reported to be 9.37% (213 fs, 796 kHz, 80 W) in ref. S2.

Figure S31. Dependence of the signal intensities of the molecular and fragment ions on the laser pulse energy. Sample, chlorobenzene. The total counting ratio is shown in the right-hand scale.

Figure S32. Dependence of the signal intensity of the molecular ion for chlorobenzene on the repetition rate of the Yb laser. Laser power at 257 nm; (A) – (C) 5 mW, (D) – (F) 10 mW, (G) – (I) 20 mW. Repetition of the laser; (A) (D) (G) 120 kHz, (B) (E) (H) 274 kHz, (C) (F) (I) 560 kHz.

Figure S33. Mass spectra of chlorobenzene measured at different background pressures in the vacuum chamber. (A) 4×10^{-4} Pa (B) 2×10^{-3} Pa (C) 4×10^{-3} Pa (D) 2×10^{-2} Pa. Laser output power, 5 mW.

Figure S34. Dependence of the background signal intensity on the background gas pressure in the vacuum chamber.
 (A) 2×10^{-4} Pa (B) 2×10^{-3} Pa (C) 4×10^{-3} Pa (D) 2×10^{-2} Pa. Laser output power, 250 mW.

Figure S35. Mass spectrum of styrene prepared using a standard gas generator at 0.1 ppm and diluted with the air (mixing ratio, unknown). Laser power, 200 mW; accumulation time, 0.5 s. Voltage of the electrode; repeller, +0.35 kV; extraction, -1.01 kV; flight tube, -1.0 kV. The signals assigned to H_2O and O_2 appeared from the constituents in the air. A linear analytical curve was constructed in the range of 0-0.5 ppm.

Figure S36. Mass spectra of (A) (B) DIMP (C) (D) DMMP. (A) (C) fs-LIMS (B) (D) EIMS. Laser power, 100 mW; accumulation time, 1 s. The mass spectra measured by EIMS were cited from the NIST database.

Figure S37. Mass spectra of TATP. (A) fs-LIMS (B) EIMS cited from the NIST database. Laser power, 100 mW; accumulation time, 1 s.

Figure S38. Mass spectra extracted from the two-dimensional display at the retention time, where benzo[a]anthracene appeared. (A) total view (B) expanded view.

Table S1. Photon energy of harmonic emissions and their possible applications.

	Photon Number	Photon Energy (eV)	Combination of Two Photons	Applications	Ionization Process
1	5	5.98	FHG (4) + F (1)	-	-
2	6	7.18	THG (3) + THG (3)	APAH (6.5-7.2 eV)	3 + 3 (RE2PI)
3	6	7.18	FHG (4) + SHG (2)	DMA (7.13 eV)	4 + 2 (RE2PI)
4	6	7.18	FIHG (5) + F (1)	APAH (6.5-7.2 eV)	5 + 1 (RE2PI)
5	7	8.40	FHG (4) + THG (3)	NPAH (7.4-7.5 eV)	3 + 4 (RE2PI)
6	7	8.40	FIHG (5) + SHG (2)	NPAH (7.4-7.5 eV)	5 + 2 (RE2PI)
7	8	9.64	FHG (4) + FHG (4)	aromatic	4 + 4 (RE2PI)
8	8	9.64	FIHG (5) + THG (3)	aromatic/aliphatic	5 + 3 (RE2PI)
9	9	10.96	FIHG (5) + FHG (4)	acetone (9.7 eV), etc.	5 + 4 (RE2PI)
10	10	12.00	FIHG (5) + FIHG (5)	aliphatic	5 + 5 (NR2PI)

F, fundamental; SHG, second harmonic; THG, third harmonic; FHG, fourth harmonic; FIHG, fifth harmonic. APAH, amino polycyclic aromatic hydrocarbon; DMA, dimethylamine; NPAH, nitro polycyclic aromatic hydrocarbon; aromatic, aromatic hydrocarbon; aliphatic, aliphatic hydrocarbon.

Table S2. Ionization energies of compounds related to the combustion of polystyrene.

Compound	Molecular weight	Ionization energy (eV), observed	Ionization energy (eV), calculated	Ionization process
propane	44	10.94 ± 0.05 (113.3 nm)	11.5967 (106.91 nm)	NR3PI
butane	58	10.53 ± 0.02 (117.7 nm)	11.3041 (109.68 nm)	NR3PI
benzene	78	9.24378 ± 0.00007 (134.13 nm)	9.2364 (134.24nm)	RE2PI
toluene	92	8.828 ± 0.001 (140.450 nm)	8.7848 (141.14 nm)	RE2PI
styrene	104	8.464 ± 0.001 (146.49 nm)	8.3455 (148.57 nm)	RE2PI
α -methylstyrene	118	8.3 ± 0.1 (149 nm)	8.3163 (149.09 nm)	RE2PI
1,3-diphenylbutane	210	-	8.5402 (145.18 nm)	RE2PI
2,4-diphenyl-2-pentene	222	-	7.8824 (157.29 nm)	RE2PI
2,4-diphenyl-4-methyl-2(E)-pentene	236	-	7.8630 (157.68 nm)	RE2PI
1,3,5-triphenylhexane	314	-	8.4654 (146.46 nm)	RE2PI
CO ₂	44	13.777 ± 0.001 (89.99 nm)		NR3PI
O ₂	32	12.0697 ± 0.0002 (102.73 nm)	-	NR3PI
N ₂	28	15.581 ± 0.008 (79.577 nm)	-	NR4PI
H ₂ O	18	12.621 ± 0.002 (98.240 nm)	-	NR3PI

Table S3. Ionization energies of compounds related to combustion of polycarbonate.

Compound	Molecular weight	Ionization energy (eV), observed	Ionization energy (eV), calculated	Ionization process
phenol	94	8.49 ± 0.02 (146.0 nm)	8.4457 (146.80 nm)	RE2PI
p-cresol	108	8.34 ± 0.03 (148.7 nm)	8.1020 (153.03 nm)	RE2PI
styrene	104	8.464 ± 0.001 (146.49 nm)	8.3455 (148.57 nm)	RE2PI
α -methylstyrene	118	8.3 ± 0.1 (149 nm)	8.3163 (149.09 nm)	RE2PI
<i>p</i> -vinylphenol	120	-	7.8434 (158.08 nm)	RE2PI
4-isopropylphenol	136	-	8.0365 (154.28 nm)	RE2PI
dimethyldiphenyl-methane	196	-	7.8997 (156.95 nm)	RE2PI
4-hydroxydiphenyl-dimethylmethane	212	-	8.5402 (145.18 nm)	RE2PI
bisphenol A	228	-	7.7640 (320.13 nm)	RE2PI
O ₂	32	12.0697 ± 0.0002 (102.73 nm)	-	NR3PI
N ₂	28	15.581 ± 0.008 (79.577 nm)	-	NR4PI
H ₂ O	18	12.621 ± 0.002 (98.240 nm)	-	NR3PI
